

**Compositions and methods for drug delivery (Technion)**

**code:** DDL-1074

The present invention is of a hydrogel containing an immobilized, naturally-occurring protein drug carrier which may be used for sustained or controlled drug delivery applications. This hydrogel matrix can also be made to be biodegradable. Following this concept, a photopolymerizable hybrid hydrogel was developed, made of poly-ethyleneglycol conjugated to PEGylated albumin for affinity based drug delivery and tissue engineering applications.
